- Heat Loss calculations should be made in accordance with the latest regulations
- Most 1, 2 & 3 bedroom properties are generally suitable for an Electric Boiler
- Properties with a high hot water demand are better suited to an Indirect Cylinder with an 'S' Plan configuration
- When installing an Electric Boiler always ensure that the incoming electrical supply is sufficient for the Boiler Output
- To accommodate "Off-Peak" electricity tariffs it is recommended that a Programmer with a facility for 3 On/Off periods is installed
- Electric Boilers are suitable for both Volt Free, Hard Wired and Wireless Thermostats and Controls
- If the property has an electric shower it is advisable that a Shower Flow Sensor or Relay Interrupt is installed to prevent the Electric Boiler and Electric Shower operating at the same time
- Electric Boilers require no mandatory annual maintenance
- Electric Boilers have no flue requirements
- EHC offer 3-Phase Electric Boilers that are suitable for light commercial purposes such as; offices, factory units, pubs, etc.

Fusion Comet Electric Boiler

Comet Electric System Boilers are designed to eliminate unnecessary external plumbing and pipe work.

They are the ideal choice for wet central heating and underfloor heating systems. It has been engineered to include the pump, auto-air vent, expansion vessel, auto-bypass and expansion vessel within the compact casing. For added safety the Boiler also incorporates a High Temperature Thermal cut-out for added protection.

Our single phase Boiler outputs are 6kW, 9kW, 12kW with the 14.4kW available for properties that require larger outputs.

To ensure maximum efficiency, all Comet Boilers incorporate six stage heating using a stainless steel heat exchanger. This unique facility will modulate the Boiler to reduce electricity consumption and running costs.

The easy-to-use control panel provides operating temperatures for flow and return, system flow rate and kW output information and enables the installer to utilise the inbuilt self-diagnostic feature during installation or routine maintenance.

The operating temperature of the Boiler can be adjusted from 20 degrees through to a maximum 85 degrees.

In light commercial properties with a 3-Phase electricity supply, we supply 23kW and 39kW output Boilers. For multiple Boiler installations it is also possible to install them in series to suit non domestic situations (see page 20).
