

CLIENT RELEASE NOTES

12.4

HIGHLIGHTS

Enhancement	We have unlocked the ability to set a Points Quantity on discounts that are ticked for Apply Discount to Entire Bill. This is so that points can be entered into the Points Qty field in the discount setup, and those points will then be taken off the client automatically when the discount is applied to the bill.
Bug fix	An issue was found when merging client together where it was possible to merge one client into another and then immediately merge the other way around causing one record to be lost - this has been fixed.
Bug fix	We have added a tick box into Setup Config Clients to allow the user to disable the client duplication suggestions popup that appears when confirming a client record.
Enhancement	We have reinstated the ability to double-click a bill in the client record purchase history grid in order to reprint their bill on the receipt printer.

Enhancement	If a day of that week had its opening times overridden (day override function) to be times that are outside of the usual opening and closing, this could cause the team member weekly view to not show their booking slots. This has been changed to show the entire day, taking into account any overridden times.
Enhancement	The client record account balance report is now shown in date order.
Enhancement	The SMS Centre now has an option to send a reminder Skin Test SMS message, warning them that they will need to contact the salon to arrange a skin test before their appointment. The booking itself will also be stamped with a label showing when the skin test SMS had been sent by the system.
Enhancement	The reminder Skin Test SMS message will only message those clients who have bookings at least 2 days from now, as messaging them for bookings tomorrow would be too soon to gain a reliable skin test result.
Bug fix	When using iSalon Advanced Points Scheme 1 and typing in the min qualifying points as 50000+ and then saving, it would cause an error - this has been fixed.
Bug fix	With 'Verify takings at end of day' ticked in the setup, if you did a Cash-up X-reading but then went back to the cash-up to close it off (X-read) it would incorrectly ask you to enter a reason for changing the day end. This has been fixed.
Enhancement	When nominating and activating a machine to be the sender of text messages, when you enabled the syncing the SMS Settings, this could send the queued messages out. Now, an appropriate warning asks the user if they wish to delete the queue before activating.
Bug fix	When the installer runs for iSalon upgrades, it runs as the Administrator user which can cause an issue with currency settings. This has been fixed.

Enhancement	i-Salon has been changed to iSalon within the Setup Configuration screen pages, and i-Bookings to iBookings.
Enhancement	We have prevented department, category, supplier and supplier lines from being saved while their names are blank.
Enhancement	iSalon will automatically change the client skin test date to today if you buy a service that requires a skin test, and the setup>configuration>clients 'Automatically update skin test after having service' tick box is ticked.
Bug fix	When using a tracked voucher to pay off a bill, there was an issue on the voucher payment grid where it would not display the pence but round up to the pound. This has been fixed.
Bug fix	Previously it was not possible to delete open purchase orders if only one remained. This has now been fixed.
Enhancement	We now show an additional warning when a product is set to go down to +1 above the minimum level during a bill, to give an early warning. This will know when the product already has an on-order value and will use that along with the current qty when deciding whether to show the warning.
Enhancement	We have unlocked the ability to apply a discount to bookings where the discount has its Apply to Entire Bill function enabled.
Enhancement	The Pay-By-Link function can be disabled or re-enabled from within the Setup Configuration pages.

Bug fix	The client record card points report was not showing any data - this has been fixed.
Bug fix	Creating a redo appointment without having a redo discount set up would cause an error when opening a redo booking. This has been fixed.
Enhancement	If today has its opening times set to be closed all day, and while viewing the diary tomorrow you tried to use the top-left date selector to try and view today, nothing would happen as the day is closed. Now, the date picker calendar will appear so that you can choose a date to view.
Enhancement	When booking, the bookings builder View Appointment Book button will now allow you to click a different timeslot, and this will update the times when returning to the builder.
Enhancement	When using the Re-order button to make an Auto order, this PO would appear at the bottom of the list. We have changed this to now show at the top of the Open orders, and in date order.
Bug fix	When you had created a bookout in the Rooms diary page, and you typed in a memo for the bookout, this was not appearing as a popup tooltip when you hovered your mouse over the bookout. This has been fixed.
Bug fix	Taking a deposit during the booking journey and using PayByLink to pay the deposit bill, but then not paying off the link within the allotted 30 minutes, would cause the link to expire but the booking prepayment would still show on the client record card. This has been fixed.
Enhancement	If you had opened iSalon, but did not view any appointment diary, and you ran a bill through the till choosing the Rebook Services button, iSalon would have shown an error warning. This has been fixed - in this case iSalon will take you to the first appointment diary with booking(s) placed to the clipboard.

Enhancement	We have added some training videos to iSalon, which can be viewed through pressing the Menu icon at the top of iSalon.
Enhancement	It is possible to add any logo, of type bmp or jpg, to the bottom of receipts - including a QR code. This can be set up in the Menu Setup Configuration Receipt page within iSalon.
Bug fix	If you had bookings in the past, when you ran a bill through for that client the Next Appointments at the bottom of the receipt would include past appointments (as they had not been completed). This has been fixed.
Bug fix	When making a bookout in the Room diary page, on occasion this wasn't providing a warning if there was a clash with an existing room bookout. This has been fixed.
Enhancement	The rebooking's report has been changed to include extra percentage figures. Also, the report now shows clients that have a booking in the future, regardless of whether they rebooked it on the same day as their previous bill.
Enhancement	We have added a new report 'Expiring Courses' which shows the courses due to expire between the dates the user has chosen.
Enhancement	When editing a client record to make changes, and then confirming the record, if you were to immediately merge to a suggested duplicate client then the changes you had made would not carry across. A warning has now been added to the client duplication popup to tell the user they would need to re-enter the changes after the merge.
Bug fix	You could book packages with services that are not in the team member skill set and it would not warn you - this has been fixed.

Enhancement	In rare circumstances the 'hide booked out team members' functionality would not hide them from the book.
Bug fix	It was found that iSalon could freeze when using Worldpay and the receipt options are set to 'pause receipt printing to allow receipts to print'. This has been fixed.
Enhancement	Automatic purchase order's function would use orders that were open or part-shipped but were archived. We have changed this to only allow completed purchase orders to be archived.
Enhancement	iSalon sets the Last Visit date against a client whenever a bill is processed, but this has been altered to set a Last Visit date only when a service bill has been processed, to keep in line with Command Centre.
Bug fix	There was an issue when refunding a bill that would take points earned back off the client. This could force the points into a negative point figure within Command Centre, and yet show as zero in the iSalon record. This has been fixed to never show below 0.
Enhancement	When a PaymentSense bill is processed where they would not supply an auth code, we were printing REFUND on receipts - we have changed this to instead say No Auth Code when refunds are processed.
Bug fix	There was a rare scenario where, when printing future appointments on receipts, it would miss one future appointment from the several printed - this has been fixed.
Enhancement	The Set Min & Max Levels page, in the Menu Setup, will stay on the page rather than exiting each time you make a change.

Enhancement

Opening and closing float amounts are now shown on the cash-up screens. On cash-up screen 2, the user can adjust the closing float amount. The closing float amount will show as the opening float on the next cash-up. The opening and closing float amounts are also shown on the cash-up report.
