SALON MANAGER

## 01 Configure Automatic Client Deletion

Hello, today I'm going to show you how to automatically set up the system to delete clients after a certain number of years of inactivity. From the client screen, go to the settings cog on the left-hand side. Once clicked, a new menu will appear. The first option at the top is to automatically delete inactive client data. To enable this, click the slider and set the number of years of inactivity before deletion. When happy with the settings, click save settings at the bottom right.
