01 Credit An Account From A Bill

Hello, today I'm going to show you how to credit an account from a bill in Seller Manager. Once you've found the bill and the client you wish to credit, you just need to go to Credit Account on the right hand side. This will load up a new menu. In here we have a box where we can type in the amount we wish to credit. Once we've entered that amount, we can click Confirm and that will add a new line to the bill with the deposit on there.

You have successfully credited an account from a bill in Seller Manager by entering the credit amount and confirming the transaction. This process adds a deposit line to the bill, reflecting the credited amount.
